## **DETAILED ACTION**

### **Drawings**

1. The proposed drawing correction filed on April 25, 2003 has been disapproved because it is not in the form of a pen-and-ink sketch showing changes in red ink or with the changes otherwise highlighted. See MPEP § 608.02(v).

### **Claim Rejections - 35 USC § 112**

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 20 and 21 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The specification does not describe what it might mean for the entrance window to be "optimized" for receiving light from a scintillator. In view of the plurality of characteristics that the entrance window and any particular scintillator might have, one skilled in the art does not have the necessary guidance as to how to make and/or use the invention.

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 20 and 21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 20 and 21 recite that the entrance window is "optimized" for receiving light from a scintillator. One skilled in the art would be unable to decide whether a specific entrance window is "optimized" or not, especially as any particular scintillator is not a part of the scope of the claim.

#### **Response to Submission(s)**

6. The amendment filed April 25, 2003 has been entered.

7. Applicant's arguments filed April 25, 2003 have been fully considered but they are not persuasive. The arguments are unable to identify a single portion of the specification that describes what it might mean for an entrance window to be "optimized." Instead, the arguments rely on what those skilled in the art "would understand" without any evidence in the specification which would make that understanding plausible. It must be further noted that the third aspect the arguments identify bears no apparent relation to the reception of light from a scintillator, as the presence of a "contact" or any "noise" arising therefrom are not only not a part of the claim, and not a part of the disclosure, but relate instead to the electrical operation or overall utility of the detector array. The arguments are unable to point to any portion of the specification as support for the proposition that the resistivity of window **20** must be minimized as a condition of optimization for light reception when, especially as amended, the detector array **14** must be *high resistivity* semiconductor material.

For at least the reasons explained above, Applicant is not entitled to a favorable determination of patentability in view of the arguments submitted April 25, 2003.

#### **Allowable Subject Matter**

8. Claims 1-8, 13-26, 31, 32, and 34-36 are allowed.

9. As allowable subject matter has been indicated, applicant's reply must either comply with all formal requirements or specifically traverse each requirement not complied with. See 37 CFR 1.111(b) and MPEP § 707.07(a).

Art Unit: 2878

10. The following is a statement of reasons for the indication of allowable subject matter: it is agreed that Dabrowski makes no suggestions regarding a high resistivity semiconducting material.

### **Conclusion**

11. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
